The basic principle of the Faculty of Medicine lies in substantive contributions as a highly-advanced regional medical center to the development of medical science and nursing and the progress of regional health services. We are dedicated to carry out a tripartite mission of providing good medical education, conducting quality research, and rendering first-rate services in comprehensive medical diagnosis and treatment, and training professionals capable of satisfactorily meeting the often-changing needs of the modern society. Under this principle, the course of Medicine aims at educating and training physicians who, in their creative practice of medicine, will be capable of grasping problems they encounter from a bioethical and sociocultural point of view as well as from a science-based medical point of view. The course of Nursing aims at educating and training nursing professionals with a high regard for nursing ethics, capable of grasping health-related problems in a holistic manner and of solving such problems with expertise and flexibility.
